About me

Mobile & AI Engineer with **1+** years of experience building mobile applications and AI-powered systems, focused on practical and scalable products.

Work Experience

Apple Developer Academy <i>Junior Developer</i> Program run by Apple and BINUS that teaches iOS development based on a research and development process.	Mar 2026 – Present
Bangkit Academy <i>ML Engineer</i> Graduated with Distinction, ranked among the top 10% of the cohort.	Aug – Dec 2024
Kepolisian Daerah Istimewa Yogyakarta <i>Full Stack Developer Intern</i> Built the backend of a web-based news scraping system with LLM-powered analysis.	Apr – Jun 2025

Organizational & Volunteer Experience

AIESEC in Indonesia <i>Customer Experience Manager</i> - Built an automation for Form submission that generated certificates and sent acceptance-letter emails, replacing 3 person with a 1 person workflow handling around 50 registrants per day. - Managed customer relations with an average satisfaction score of 9.7 out of 10	Aug – Sep 2024
--	----------------

Research & Projects

K-sini: Indoor Navigation iOS App - Tech lead for a 3-developer team: set up the Git branching strategy, reviewed and merged pull requests. - Mapped a real-world train station into GeoJSON, enabling multi-floor map rendering and BFS-based indoor routing.	June – July 2026
Kriptoin: Crypto Trading Simulation Mobile App - Implemented SHA-256 password hashing, session management with auto-logout on inactivity. - Engineered a service layer around REST API, and a Hive-based caching layer to control third-party API usage.	June 2025
PixPlay: Cloud-Based Music Player - Implemented JWT authentication with bcrypt password hashing, short-lived access tokens, and route-protection middleware. - Built a CI/CD pipeline with Docker image build, Cloud Storage, deploy to Cloud Run, with the frontend served on GCP App Engine.	May 2025
ML for Earthquake Classification - Built an end-to-end ML pipeline with 2,800+ seismic data ObsPy waveform processing, EDA on imbalanced classes, and stratified train/val/test splits. - Designed a CNN base with a custom loss function as an feature extraction, improving accuracy from 90% to 98%	Feb 2026
SIGAP: AI News Analysis Web App - Designed an LLM pipeline using Llama 3.2 to automatically generate solutions for every article, improving analysis speed from 2 hours to 10 minutes. - Developed REST API endpoints and tunneling via NGROK for news feeds to the frontend, reducing data processing time over 1,000 articles monthly.	June 2025

Education

Universitas Pembangunan Nasional Veteran Yogyakarta – Yogyakarta, Indonesia <i>Bachelor of Informatics</i> - GPA 3.75/4.00 - Relevant coursework: Mobile development, Machine Learning, Cloud Computing Technology.	Aug 2022 – May 2026
---	---------------------

Skills

Hard Skills Swift, Flutter, Docker, Google Cloud, Node.js, Express.js, TensorFlow, PyTorch, Keras, LangChain, Ollama, Hugging Face, MLX.
Soft Skills: Technical Leadership, Cross-functional Collaboration, Problem Solving, Code Review, Communication.
Languages: Indonesian (Native), English (Professional Working Proficiency).
